

We help keep our system safe and reliable by maintaining 2,000 miles of line year-round.

Our vegetation management contractors work to maintain safety around our lines and minimize outages by pruning and removing trees.

Please let us know if you'd like to be notified before crews begin work in your area. You can also request that we speak with you before pruning and removing trees near your property.

Contact us at [versantpower.com/trees](https://www.versantpower.com/trees) or call **(207) 973-2892**.

Right Tree, Right Place

Planting trees on your property this spring?

Before you get started, keep the following tips in mind:

- Look up and down. Always be safe around power lines.
- Check on planting restrictions near roads and call Dig-Safe at 811 to ensure that there are no buried lines or pipes.
- Research the height of your desired tree at maturity and plant your trees at least as far away from power lines as they will stand at full height.

For more information, visit our website at [versantpower.com/trees](https://www.versantpower.com/trees)
