Re: Interconnection System Impact Cluster Study Results – Maine Public District (MPD)

MPD Cluster Study Participants,

Versant Power and its consultants have completed the first Interconnection System Impact Cluster Study (Study) for the MPD.

The objective of this Study was to demonstrate whether the proposed distributed generation projects (Projects) will have a significant adverse effect upon the reliability or operating characteristics of the bulk power transmission facilities of Versant Power or New Brunswick Power's transmission systems.

Study results indicate that the Projects do not result in significant adverse impact on the reliability, stability or operating characteristics of Versant Power's transmission facilities or the transmission facilities of New Brunswick Power.

Versant Power is continuing the interconnection process and will coordinate with those Projects that have paid their down payment to move forward with the design engineering phase.

Sincerely,

/s/ Megan Greenlaw
